

# PrivacyPal

Your AI-powered Privacy Policy Tracker

Hackathon W3PN Berlin 2025

# Problem

Most users ignore privacy policies.

They are too long, complex, and subject to unannounced changes.

Users unknowingly accept invasive terms.

# Solution

PrivacyPal monitors and version-controls visited privacy policies.

It alerts users when content changes.

It can suggest actions like deletion requests or safer alternatives using AI.

# How It Works

- Runs as a browser extension
- Saves the text and hash of each visited policy
- Detects changes and notifies the user
- Uses local storage for privacy
- AI analysis is optional and offline-ready

# Privacy Impact

Users regain control over the privacy terms they accept.

All processing is local. No cloud logging.

Empowers decisions through transparency.

# Real Use Cases

- Journalists tracking policy changes
- Privacy-conscious users
- Developers adding accountability to apps
- Legal professionals auditing practices

# What's Next

- Export policy logs
- OCR detection for non-text formats
- Collaborative flagging of suspicious changes
- Integration with privacy-respecting services
